School of Computer Science – Coursework Issue Sheet

Session	2018/19	Semester	2
Module Name	C++ Programming	Code	COMP2006 G52CPP
Module Convenor	Jason Atkin		

Coursework Name	CW3: Basic uses of the framework (14%)	Weight	14%
Deliverable	Cleaned, Zipped project directory submitted to moodle before the deadline of the end of the day. Demonstration and marking of coursework in regular labs before the deadline of the end of the lab (4pm). To get a mark you must submit all deliverables to moodle AND demo your work.		
Plagiarism	All of the code which you submit for this coursework must be your own work. You must work alone on this coursework and may not write your code with other people. By having your work marked in labs and/or by submitting to moodle, you certify that the work you have had marked is your own, and that you are happy for the usual (severe) plagiarism penalties to be applied if this is found to not be the case. You MAY copy-paste code from the samples/demos provided.		
Format	Verbal discussion/demonstration of your running program and the source code in the lab, and submission of the code (as .c/.cpp files or a zip) into the moodle CW3 submission area.		

Issue Date	7th March 2019
Submission Date	Demo it in the labs by 4pm 21st March. Submit the zip file to moodle on 21st March – before or after the demo. **The deadline time is most important for the demo.**
Submission Mechanism	Submission via both the moodle page and demonstration of work in labs.
Late Policy	Late marking: Due to the marking in labs we have not previously allowed late submissions without previous approval. However, this year we have decided to allow late submissions for a severe penalty. If you do not have your worked marked in or before the lab of the deadline then you may have it marked in the following lab but will suffer a penalty of a 25 percentile point reduction in the mark (for having it marked 5 working days late). i.e. if you were going to get a mark of 100% for that coursework, you would get a penalised mark of 75%, while a normal mark of 50% would give you a penalised mark of 25%, etc. You are strongly encouraged to avoid any late marking. You may not have it marked any later than the next lab! If you have extenuating circumstances for a coursework submission please tell the module convenor in advance or as soon as you can, and submit an extenuating circumstances form.
Feedback Date and Mechanism	Immediate verbal feedback given at time of marking, providing mark and explanation of why it is valid according to the marking criteria. Your mark will appear on moodle soon after the demo.

Instructions	Please see the requirements document for each part on the courseworks section of the moodle page.
Assessment Criteria	Specific criteria must be met, which are clearly explained in the requirements document.
